Monetary policy (I)

Interest rate expectations of FOMC participants („Fed dots“)

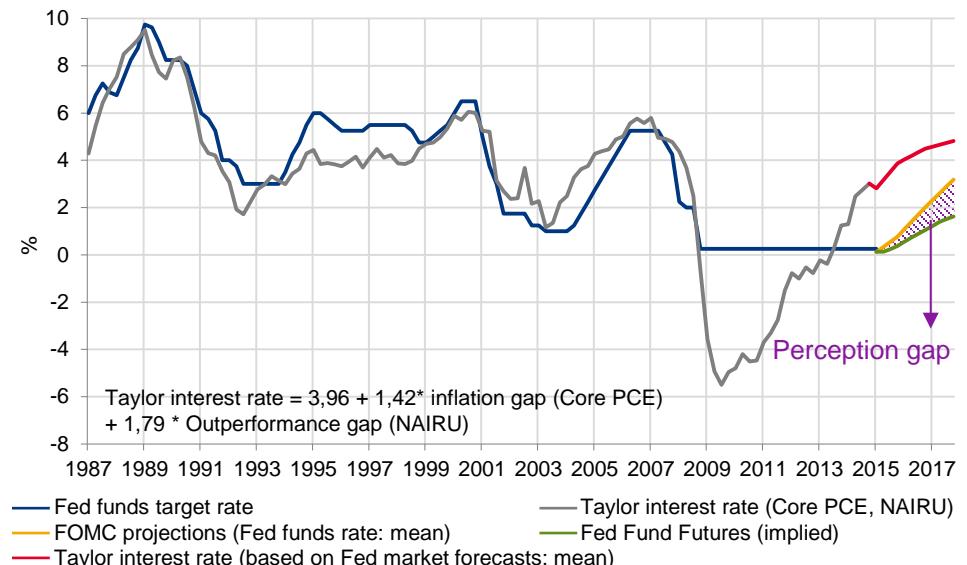

Fed funds rate in %

- FOMC participants' judgment of appropriate Fed funds rate at the end of the specified calendar year or over the longer run.
- Current base rate

Source: Board of Governors of the Federal Reserve System (March 2015, December 2014 in brackets), Allianz Global Investors GmbH; as at March 31st, 2015.

Risks inherent in medium-term interest rate forecasts (forward guidance)

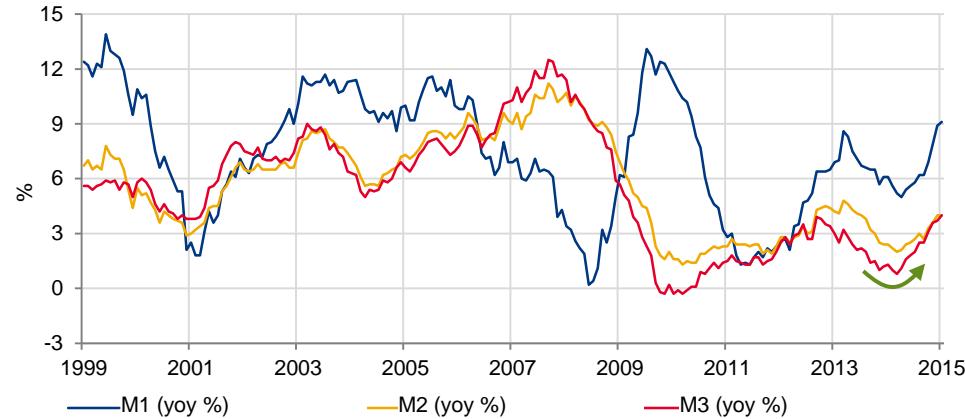

The most recent macroeconomic and Fed funds rate projections by FOMC participants again conveyed the central bank's strategy to remain „behind the curve“ for the foreseeable future. This is clearly demonstrated by our modified „Taylor“ rule, which mimics the historical reaction function of the central bank. Money markets are pricing in an even shallower rate path compared to the already benign average Fed funds projections by FOMC participants.

* Note: Our modified „Taylor“ rule derived Fed Funds target rate is based on a long-term, neutral nominal rate coupled with weighted output (NAIRU vs. actual unemployment rate) and inflation gaps („Core PCE“ inflation vs long-term core inflation target on 1.5-2.0%).

Bond market outlook (I)

Market volume of outstanding public debt* with negative yields and yields below the ECB's deposit rate (%)

*) excl. T-Bills, incl. inflation-linked bonds

**) incl. ECB and EIB holdings of GGBs.

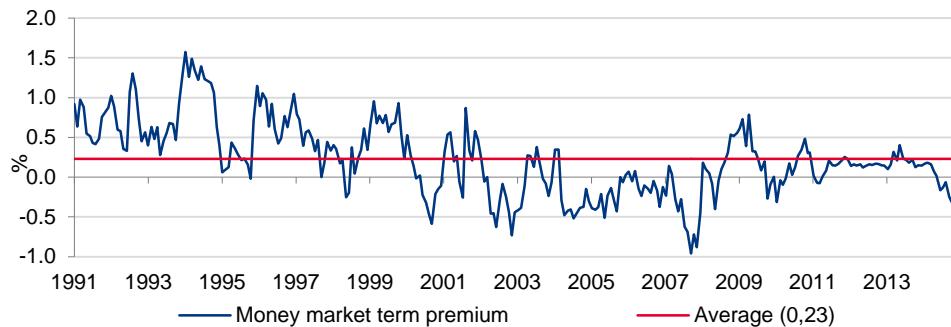

Past performance is not a reliable indicator of future results.

Sources: Bloomberg, Allianz Global Investors GmbH; as at April 16th, 2015.

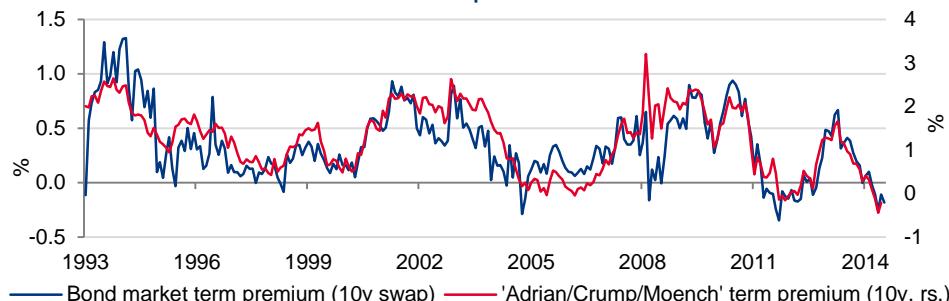

Bond market outlook (II)

Higher term premia and repricing of medium-term monetary policy expectations to weigh on US Treasuries

United States: Money market term premium

United States: Bond market term premium

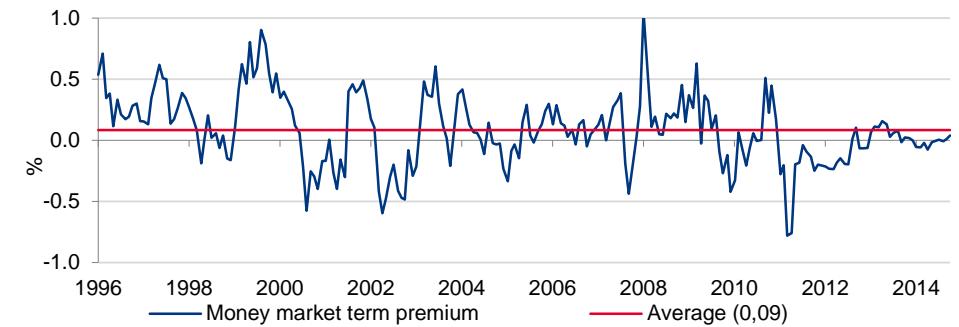

Going forward we expect both, a repricing of medium-term monetary policy expectations and a normalization of term premia to contribute to higher long-term interest rates in the United States.

Source: Bloomberg, Credit Suisse, Federal Reserve, Consensus Economics, Allianz Global Investors GmbH; as at March 31st, 2015

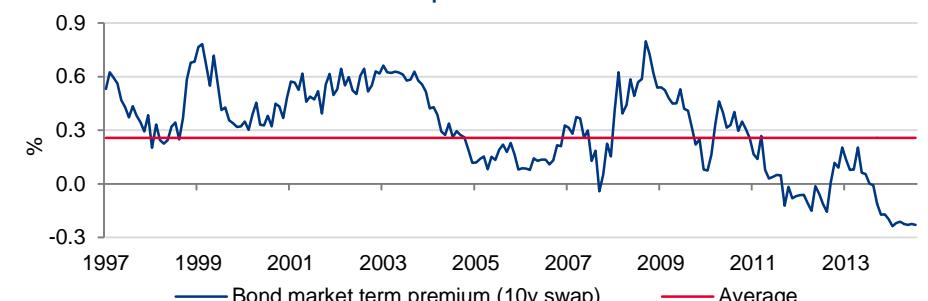

Note: Money market term premium based on implicit 3m interest rates (12m forward) vs. consensus interest 3m rate expectations (12m forward). Bond market risk premium based on regression of 1y forward rates (one to five years) vs. subsequent 1y excess returns of 10y swap.

Eurozone bond market: long-end term premium at historically low levels

Eurozone: Money market term premium

Eurozone: Bond market term premium

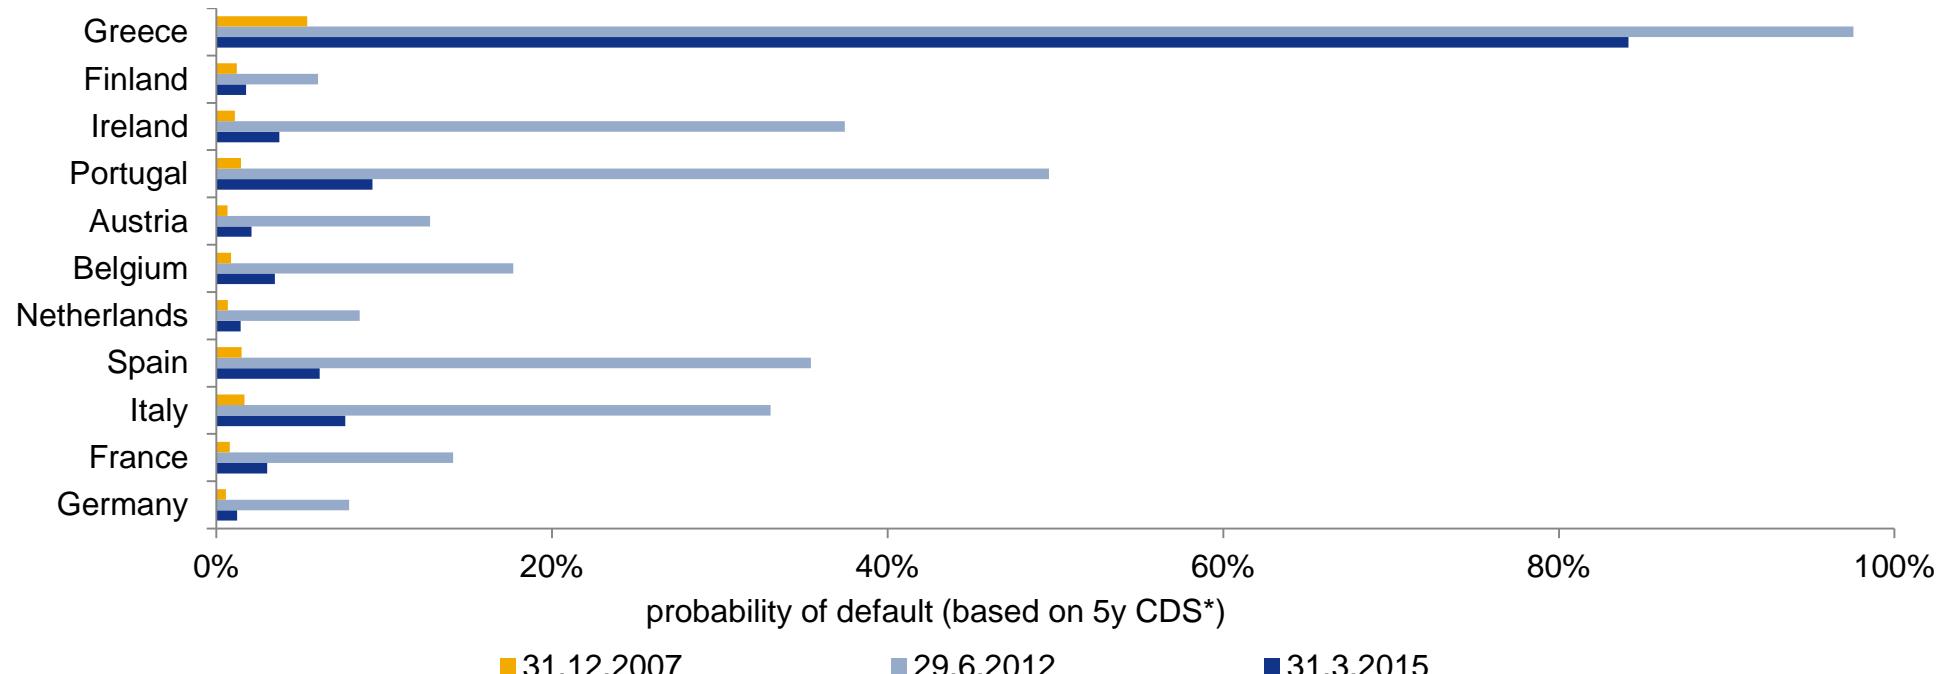

Long-end term premia in the Eurozone have plummeted to new historical lows over recent weeks.

Source: Bloomberg, Credit Suisse, Consensus Economics, Allianz Global Investors GmbH; as at March 31st, 2015

Bond market outlook (III)

Euro sovereigns: compared to pre-crisis levels, markets still priced for higher probability of default

Eurozone sovereigns: Implied default probability

Euro peripheral sovereign markets are currently pricing in a higher probability of default over coming years compared to pre-crisis levels. Peripheral risk premia should remain stable over the months ahead against the backdrop of a slow but ongoing economic recovery and fiscal healing combined with an accommodative monetary policy stance by the ECB.

Bond market outlook (IV)

The ‚Protection Coefficient‘: A relative valuation tool

$$PC_t = \frac{BE_t}{\sigma_t}$$

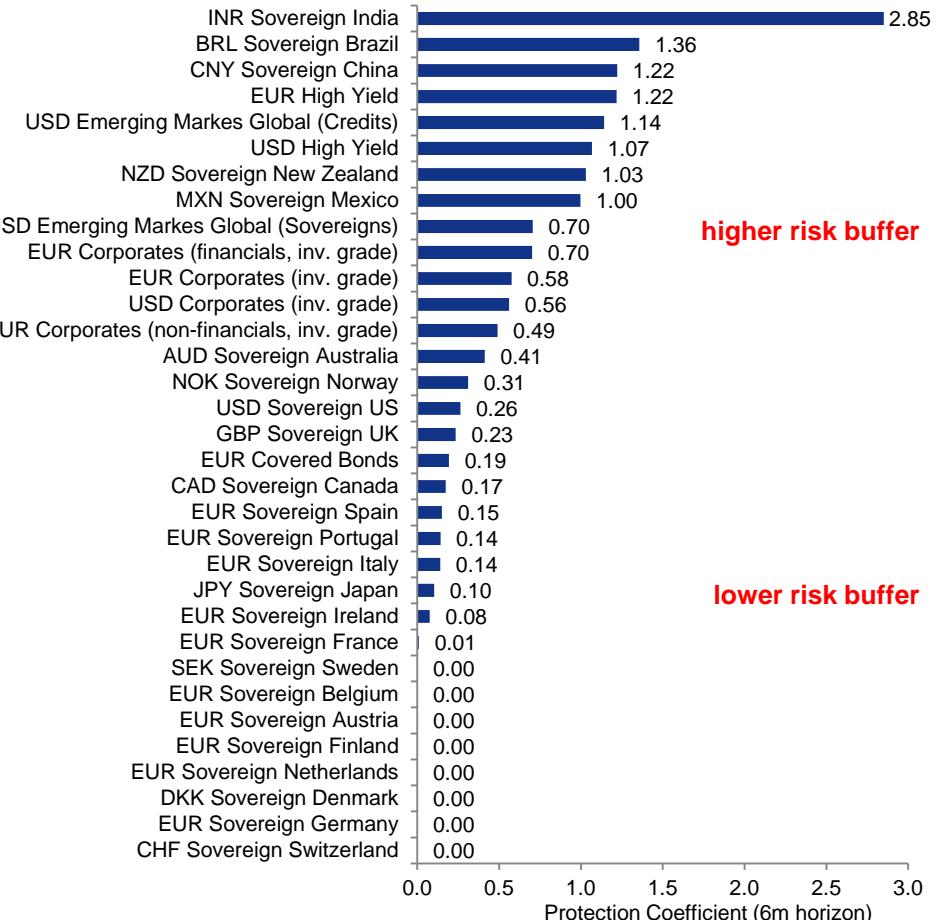

PC: protection coefficient
 BE: ‚break even‘ spread(return: 0%)
 σ: adjusted standard deviation(yield changes)
 t: time period

- The ‚Protection Coefficient‘ is a relative valuation tool for investments in different bond markets
- It is based on a ‚break even‘ spread measuring the yield increase at which the nominal return of the respective segment is 0% over the period under consideration
- For a meaningful comparison we risk adjust the measure by using the adjusted standard deviation of historical yield changes. For investments in different currencies fx risks needs to be considered as well

Already a small increase of interest rates would cause losses for ‚safe‘ government bonds

,Protection Coefficient‘

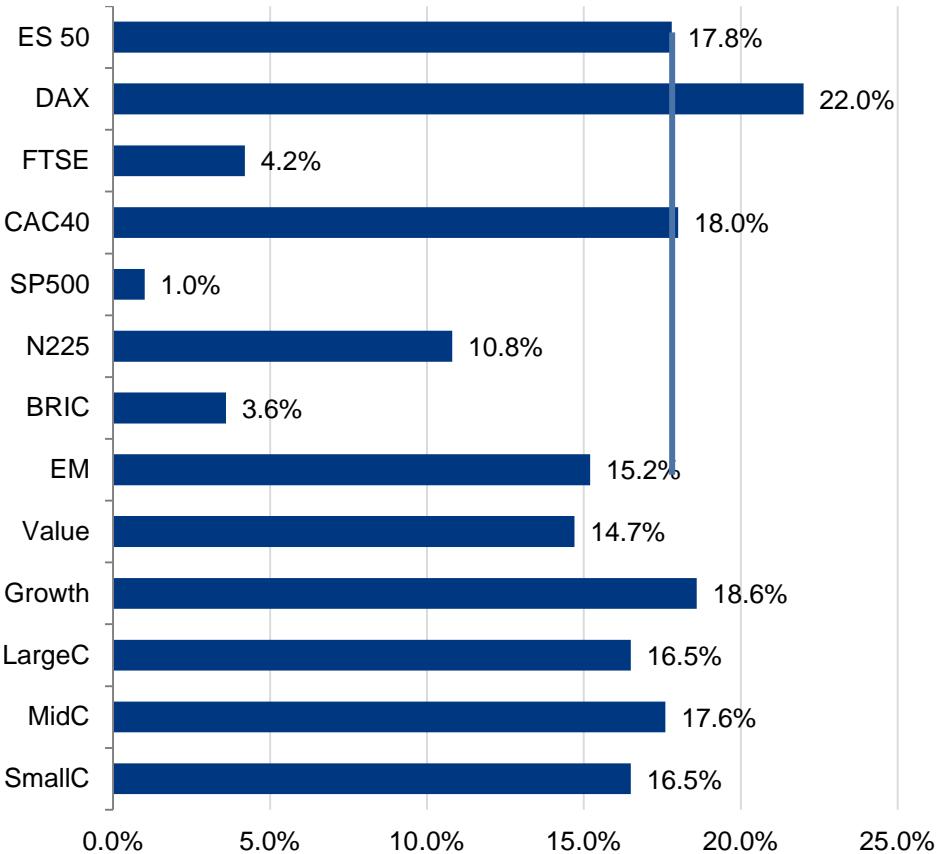

Note: Calculation excludes currency risks and ‚roll down the yield curve‘ effect. Sovereigns based on 5y yields.
