100+

Using or planning to use our SWIFT Test Sparring Partner (T2)

TIPS & T2S

Procedures ready to automatically migrate existing customers

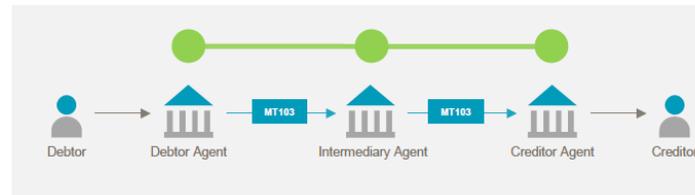

Enhancing cross-border Payments

From sequential message exchange to transaction management

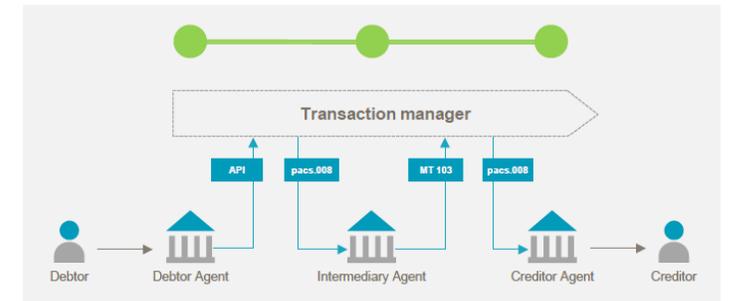

Traditional messaging

Tracking and service levels with gpi

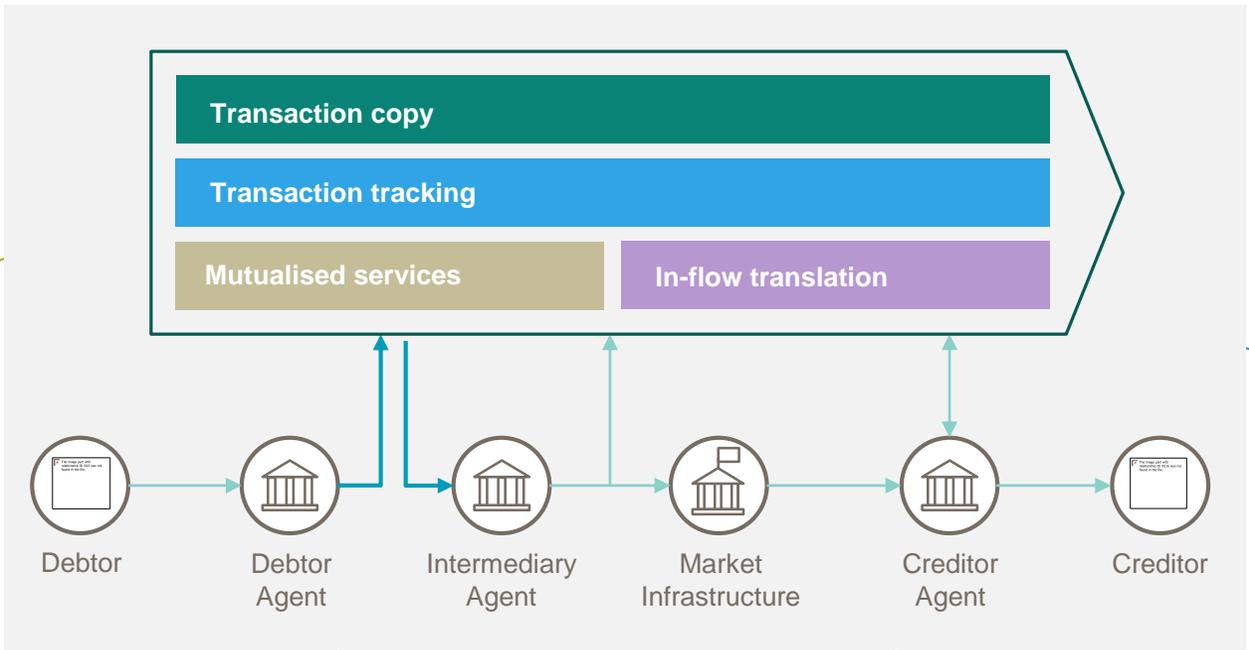

Transaction management

SWIFT Transaction Manager

Allowing for instant frictionless transactions

The transaction manager maintains complete rich transaction data and status

The transaction data can be accessed by the actors involved in the transaction

During the different steps in the transaction flow, the data of the transaction is built up

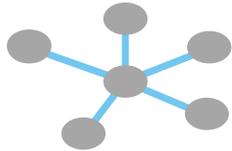

Rich data is maintained even if an actor uses a less rich data format

In a nutshell...

Congratulations! Europe is leading the way with adoption of fully fledged ISO 20022

SWIFT is fully supporting this major undertaking. Early adopters benefits will be made possible thanks to the Transaction Manager

SWIFT provides you with a platform for collaborative innovation, aiming for instant frictionless transactions
